What is claimed is:

- 1. A cellular phone for interchanging information with a base station included in a mobile communication system by radio, said cellular phone comprising:
- a first speaker for selectively outputting a received speech or sound;
 - a second speaker for outputting sound; and
- a controller for controlling output of a received speech or sound from said first speaker and said second speaker in accordance with sound setting selected beforehand.
- 2. The phone as claimed in claim 1, wherein the sound setting is to cause said first speaker to output a received speech or to cause said first speaker to output sound.
 - 3. The phone as claimed in claim 2, further comprising:
- a received speech amplifier and a sound amplifier connected to said first speaker for amplifying a received speech and sound, respectively; and
- a sound amplifier connected to said second speaker for amplifying sound.
- 4. The phone as claimed in claim 3, wherein when said first speaker is assigned to a received speech, said controller causes a call incoming signal to be input only to said sound amplifier connected to said second speaker.
- 5. The phone as claimed in claim 4, wherein during conversation, said controller causes a received speech signal to be input only to

said sound amplifier connected to said first speaker.

- 6. The phone as claimed in claim 5, further comprising a speech memory for storing speech data, wherein said controller causes, when said speech data should be reproduced, a speech signal to be input to said sound amplifier connected to said first speaker and said sound amplifier connected to said second speaker.
 - 7. The phone as claimed in claim 6, further comprising:
- a radio section for interchanging information with a remote station via an antenna;
 - a memory for storing data;
- a signal processor for executing preselected processing with a signal received via said radio section or reading data out of said memory to thereby generate a signal corresponding to said data; and
- a digital-to-analog converter for digitizing an output signal of said signal processor and delivering a resulting digital signal to said controller.
- 8. The phone as claimed in claim 3, wherein when said first speaker is assigned to sound, said controller causes a call incoming tone signal to be fed to said sound amplifier connected to said first speaker and said sound amplifier connected to said second speaker.
- 9. The phone as claimed in claim 8, wherein said controller causes a volume of the call incoming signal output from said first speaker to increase stepwise
 - 10. The phone as claimed in claim 1, further comprising: a received speech amplifier and a sound amplifier connected

to said first speaker for amplifying a received speech and sound, respectively; and

- a sound amplifier connected to said second speaker for amplifying sound.
- 11. The phone as claimed in claim 10, wherein when said first speaker is assigned to a received speech, said controller causes a call incoming signal to be input only to said sound amplifier connected to said second speaker.
- 12. The phone as claimed in claim 11, wherein during conversation, said controller causes a received speech signal to be input only to said sound amplifier connected to said first speaker.
- 13. The phone as claimed in claim 12, further comprising a speech memory for storing speech data, wherein said controller causes, when said speech data should be reproduced, a speech signal to be input to said sound amplifier connected to said first speaker and said sound amplifier connected to said second speaker.
 - 14. The phone as claimed in claim 13, further comprising:
- a radio section for interchanging information with a remote station via an antenna;
 - a memory for storing data;
- a signal processor for executing preselected processing with a signal received via said radio section or reading data out of said memory to thereby generate a signal corresponding to said data; and
- a digital-to-analog converter for digitizing an output signal of said signal processor and delivering a resulting digital signal

to said controller.

- 15. The phone as claimed in claim 10, wherein when said first speaker is assigned to sound, said controller causes a call incoming tone signal to be fed to said sound amplifier connected to said first speaker and said sound amplifier connected to said second speaker.
- 16. The phone as claimed in claim 15, wherein said controller causes a volume of the call incoming signal output from said first speaker to increase stepwise
 - 17. The phone as claimed in claim 1, further comprising:
- a radio section for interchanging information with a remote station via an antenna;
 - a memory for storing data;
- a signal processor for executing preselected processing with a signal received via said radio section or reading data out of said memory to thereby generate a signal corresponding to said data; and
- a digital-to-analog converter for digitizing an output signal of said signal processor and delivering a resulting digital signal to said controller.
